Settings:

Trailing parameters:

Trailing (TRUE/FALSE): When FALSE, EA will work in information mode only (no orders will be closed).

Direction (Trend/CounterTrend): If Direction = Trend, the indicator defines the Stop-Loss of your orders. In other words, EA will close the BUY orders when the price crosses the selected indicator from ABOVE,

and the SELL orders when the price crosses the indicator from BELOW. If Direction = CounterTrend, the indicator corresponds to the Take-Profit of your orders. Accordingly, EA will close the BUY orders when the price crosses the selected indicator from BELOW, and the SELL orders when the price crosses the indicator from ABOVE.

Indicator (MovingAverage/HiXBars/LowXBars/IchimokuTenkan/IchimokuKijun/ParabolicSAR): This parameter selects the indicator, which will be used for trailing.

IndentPips: If nonzero, EA will shift the indicator by the given number of pips above (IndentPips > 0) or below (IndentPips < 0).

CloseOnlyInProfit (TRUE/FALSE): If TRUE, EA will close orders ONLY if they are in profit.

Order parameters:

Ticket: If nonzero, EA will act only on the order with the specified ticket. If 0, disabled.

Magic: If nonzero, EA will act only on the orders with the specified magic number. If 0, disabled.

Moving Average parameters:

MA_Period: Period of MA.

MA_Method (MODE_EMA/MODE_SMA/...): Selector of MA method (EMA, SMA, LWMA, ...).

MA_Price (PRICE_CLOSE/PRICE_HIGH/...) : Selector of the applied price (Close, Open, High, Low, Weighted,...).

Hi-Low XBars indicator parameters:

This indicator shows the high/low of the last XBars bars.

XBars: the number of bars.

Ichimoku indicator parameters:

InpTenkan: Ichimoku parameter Tenkan-sen.

InpKijun: Ichimoku parameter Kijun-sen.

InpSenkou: Ichimoku parameter Senkou Span B.

Bollinger Bands indicator parameters:

BB_Period: period of indicator

BB_Deviation: deviation parameter

BB_Price: the applied price (Close, Open, High, Low, Weighted,...).

Indicator graphics parameters:

These parameters define how the selected indicator is presented on the chart.

NBars: the number of bars for which the indicator will be drawn.

Rainbow (TRUE/FALSE): If TRUE, the rainbow colors will be used for indicator.

LineCol: Color of the indicator. Used only if Rainbow=FALSE.

LineStyle (STYLE_SOLID/STYLE_DOT/...): Line style for the indicator (solid,dash,dot...)/

LineWidth: Line width of the indicator.

Information panel parameters:

These parameters define how the information panel of EA is presented on the chart.

comment_color: Font color.

show_box (TRUE/FALSE): Show the background of the information panel or not.

box_color: Color of the background of the panel.

comment_Yshift: Vertical shift of the panel.

InfoOnTheRight (TRUE/FALSE): If TRUE, the panel will be placed in the (empty) right-hand side of the chart.

Other parameters:

Shot (TRUE/FALSE): If TRUE, EA will make a screenshot after each closing of the order. The screenshot is placed in the folder Files/ArgoTrail EA name_of_currency_pair/ of the Data Folder of your MT4 terminal.
